Data Selection

- Urban Social Disorder Version 3.0 (2022) provides a comprehensive overview of societal conflict dynamics across various regions.
- The dataset comprises events occurring within various cities and underwent processing to aggregate event types and participation counts across multiple cities within each country. Event types and participation counts from multiple cities within each country were averaged together.
- **PTYPE** categorizes societal conflicts based on their overall scale and nature. The graph helps visualize the distribution of conflicts across various categories.
- **NPART** categorizes the participants involved in societal conflicts. It tracks two metrics ***participants***: *everyone actively involved in the event regardless of side* and ***affected people***: *those directly impacted by the event, even if they weren't actively participating*.

Analysis 1: PTYPE

Analysis 2: NPART
